

AHMET SEZGİN

EXPERIENCE

COMPUTER ENGINEERING CO-OP

Pona Teknoloji

Jan 2026 - May 2026

- I developed an AI-powered network anomaly detection system based on Long Short-Term Memory (LSTM) neural networks using Python and TensorFlow
- I contributed to the development of "Sectify," a cross-platform 2FA ecosystem that includes a Flutter mobile app featuring a Windows RDP C++ authentication module and Firebase Cloud Messaging (FCM) integration for sending push notifications for real-time verification.
- I contributed to the development of a cross-platform enterprise VPN tunneling application using the Flutter framework to ensure secure and stable connections.

VICE CHAIRMAN

Hasan Kalyoncu Software Community

2022 - 2026

- To encourage active participation, networking, and the sharing of information among colleagues, they organized various technical workshops and community events.
- To ensure the successful implementation of community initiatives, they coordinated project teams by effectively delegating responsibilities and managing timelines.

ONLINE SALES PROJECT MANAGER

Umpa Ajansı Graphics and Software Office

2021 - 2025

- I managed an Etsy shop and handled e-commerce operations; I played an active role in product listing, shop optimization, content management, and day-to-day operational processes.
- I developed custom scripts and applications to automate repetitive design and data workflows, ensuring that manual processes were carried out more quickly, efficiently, and sustainably.
- I developed software solutions integrated with the Adobe ecosystem to provide technical support for the agency's visual production and design processes; I created tools and solutions that streamlined the workflows of design teams.

EDUCATION

2021 - 2026

Hasan Kalyoncu University

Computer Engineering

GNO: 3,25

SKILLS

- Online Store Management
- Photoshop, Illustrator, Corel Draw;
- Office Applications; Macro
- Programming; System
- Development; Python, C/C++, JS
- Machine Learning, PyTorch; Image
- Processing; OpenCV
- Full-Stack Web Developer
- Data Analysis and Labeling
- SQLite, MySQL
- English

PROJECTS

- Automated mockup generation program
- Automated hashtag and title generation program
- Automated pin uploading to Pinterest
- Secure monitoring: Detection of dangerous tools using machine learning
- Sectify: Windows RDP C++ two-step authentication module
- Anomaly detection by monitoring network traffic using LSTM
- Monitoring water quality with LDR
- Scrabble algorithm and application
