ABOUT ME

I am a Computer Engineer working in the fields of machine learning, computer vision, and software development. I have developed image processing, network anomaly detection, and automation systems using Python, C++, and TensorFlow. I have worked on Flutter-based cross-platform applications, an enterprise VPN client, and authentication solutions for Windows RDP. By combining my software development experience with my research work and project coordination skills, I focus on producing practical solutions and specializing in the AI/ML field.

EDUCATION

Hasan Kalyoncu University

Computer Engineering · 2021 - 2026

GNO: 3,25

EXPERIENCE

Computer Engineer Co-op

Pona Teknoloji · February 2026 – May 2026

- I developed an LSTM-based network anomaly detection system using Python and TensorFlow to detect abnormal behavior in network traffic.
- I developed a cross-platform enterprise VPN client using Flutter that provides a secure and stable connection.
- I worked on the Sectify two-factor authentication system; I contributed to the mobile authentication process by developing a C++ authentication module for Windows RDP and integrating Firebase Cloud Messaging.

Project Manager

Umpa Agency Graphic Design and Software Studio · 2021–2025

- I developed automation scripts and custom applications to streamline repetitive design and data workflows.
- I reduced manual data entry and accelerated workflows by developing macros for Microsoft Office processes.
- I coordinated between software solutions and design requirements; I managed teams' workflows and project activities.

Vice President

Hasan Kalyoncu Software Community · 2022–2026

- I played a role in organizing technical events and team projects; I contributed to knowledge-sharing processes within the community.

TECHNICAL SKILLS

AI / ML: Python · TensorFlow · YOLO · ResNet · VGG · OpenCV · LSTM

Programming: C · C++ · JavaScript · Rust

Software Development: Flutter · Node.js · REST API · Full-Stack Development

Databases: MySQL · SQLite · Firebase

Tools: Git · GitHub

Games / 3D: Unity · Unreal Engine · Blender
